European Subsidiarity Protocol

A Resource for EPC Programmes

Version 1.0

26 March 2026

How to Use This

What This Is

The European Subsidiarity Protocol is a **diagnostic and actuation framework** that makes subsidiarity empirically measurable. It answers a question current governance tools cannot: *For a given policy problem, which level of governance—local, regional, national, or EU—should solve it?*

The framework is fully documented, politically hardened (stress-tested against Commission, ECB, Member States), and deployment-ready. It requires no treaty change and can be tested at zero policy risk through a Parallel Diagnostic Phase.

Why It Matters for EPC's Work

EPC Programme	Framework Component	How It Applies
Democracy and Institutions	Global Subsidiarity Index (GSI) + Optimal Governance Tier Matrix	Provides empirical evidence for Yellow Card objections; strengthens Better Regulation and REFIT with measurable subsidiarity diagnostics
Social Europe	Civic Value Registry + Conditional Service Credits	Makes informal care capacity visible; activates local care resources; reduces pressure on national healthcare budgets
Strategic Foresight / Geopolitics	Three-layer architecture (Sensor → Brain → Muscle)	Positions the EU as the global leader in adaptive governance—an alternative to U.S. fragmentation and Chinese centralization

---

What the Framework Contains

Component	Function	Status
Full Technical Specification (v1.2)	Complete architecture, indicators, deployment model	Documented, 40+ pages

Component	Function	Status
Annex A: GSI Framework	4 dimensions, 16 indicators, EU-CAF complexity adjustment	Peer-review ready
Annex B: Actuation Layer	Civic Registry + Conditional Service Credits + ECB-safe design	Pilot-ready
Executive Briefing (2 pages)	High-level overview for policymakers	Available
Architecture Map (1 page visual)	System diagram showing three-layer architecture	Available
FAQ	Answers to likely questions	Available

How EPC Could Use This

Option 1: Integrate into Existing Projects

- **Better Regulation / REFIT work:** Use the GSI as a case study in empirical subsidiarity measurement
- **Care policy work:** Use the Civic Registry and CSC as a model for activating informal care capacity
- **Institutional reform work:** Use the framework as a concrete proposal for operationalizing Article 5

Option 2: Publish a Briefing

EPC publishes a short piece (with me as author or co-author) introducing the framework to a policy audience

I provide the text; EPC provides editing, branding, distribution

Option 3: Host a Workshop or Roundtable

Bring together Committee of the Regions, Eurocities, national parliamentarians, and Commission officials to discuss the GSI as a tool for subsidiarity implementation

I provide the materials and technical input; EPC convenes the stakeholders

Option 4: Connect to Partners

If this isn't a fit for EPC's current work, introductions to relevant actors (Committee of the Regions, Eurocities, member state administrations) would be invaluable

---

What I Can Provide

- **Full documentation** (technical spec, annexes, briefings, maps)
- **Written contributions** (briefings, articles, policy papers)
- **Technical consultation** (by email—I work best in writing)
- **Materials adapted** for different audiences (shorter summaries, translations, presentations)

I am not a public speaker, but I am a thorough writer and systems architect. I can support EPC in any way that plays to these strengths.

Next Steps

If this is of interest, I'm happy to:

1. **Provide the full technical documentation** (if you haven't already received it)
2. **Draft a short piece for EPC's website** in whatever format works
3. **Answer questions by email** about any component of the framework
4. **Discuss how this might fit** into your current programmes

No pressure, no expectation—just an offer of resources if they're useful.
